Self-serve vs Enterprise

Startups & Indie Devs

Community, contribution, feedback and iteration

Large Global Enterprises

Our Core Commercial Focus

Startups & Indie Devs

Agent Building Challenges:

- Building agents means wrestling with API integrations, auth flows, and token/secret sprawl
- Context windows get bloated -> agents get dumb + expensive
- Maintaining integrations across tools is fragile and time-consuming

Jentic's Solution

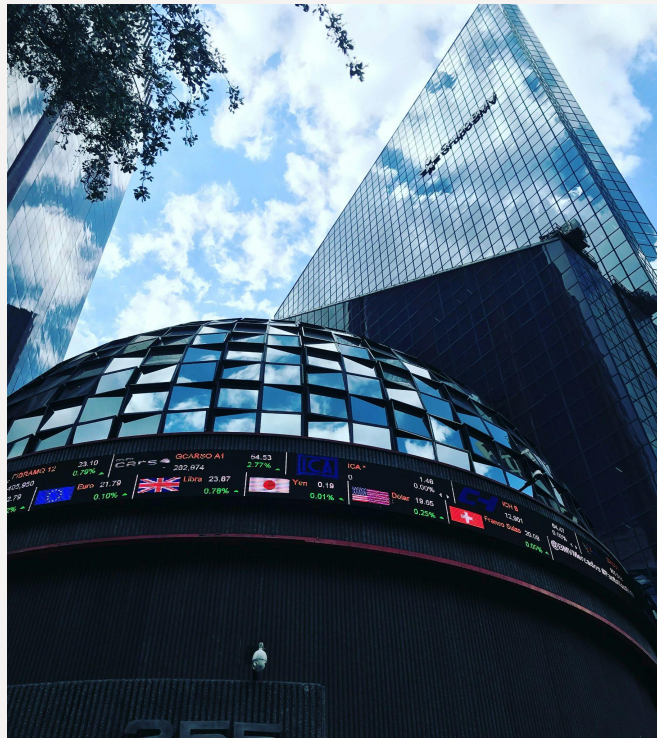

- 1500+ SaaS Public APIs, all accessible through Jentic platform
- Jentic handles all connection, auth & integration complexity
- Create a single Jentic MCP tool instead of wiring dozens of services yourself
- Search-and-Execute runtime gives the LLM the right tool at the right time
 - No context bloat, faster responses, better agent performance

Large Enterprises

Large Global Enterprises

All of the same agent building challenges, in addition to the need for:

- AI Readiness Diagnostic Tools
- Private API Ingestion & Optimization
- Agentic sandbox testing & business process mining
- Deterministic agentic workflows using open standards
- Controlled determinism dials in production environments
- Data flywheel that improves your agentic systems

Knowledge thrives in the open

Built on foundation of established open standards
